I am an empirical social scientist focused on methodological questions related to data collection and data quality, including survey methodology, data science, and computational social science. My work emphasizes the use of social media, large-scale textual data, and regional data. I conduct substantial research on broader issues of social inequality and stratification, such as health inequalities, sexual and gender diversity, racism and discrimination, and the experiences of immigrants. My approach integrates methodological innovation with empirical research to provide deeper insights into these social aspects.
